WHERE IT GOES

This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

Cut the blank 242 wide x 270 tall from 6 mm plate; square, deburr, round the corners to about 3 mm. Front view is the reactor side.
Measure across from the left edge and up from the bottom edge.
Clamp studs: two M8 tapped holes (drill 6.8) 112 across, 65 and 195 up. The reactor axis is 112 from the left edge.
Enclosure: four M4 tapped holes (drill 3.3) 182 and 226 across, 78 and 192 up.
Saddles: four 4.5 mm holes 25 across, 15, 29, 241 and 255 up; countersink them on the back (wall) face.
Wall: four 5.5 mm holes 7 and 234 across, 10 and 260 up.
Deburr every hole on both faces.
Check: lay the saddles and the enclosure on it and look through each hole; the holes line up without forcing a screw.
