WHERE IT GOES

This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

Laser cut a ring 72 outside dia, 51 inside dia, from 2 mm 316.
Six 3.4 mm holes on a 65 dia circle, every 60 deg starting at 30 deg; countersink them 90 deg on the bottom (LED) face so M3 countersunk screws sit flush.
Flatten the top face if the cut left it bowed. The window does not touch it: a 0.5 mm PTFE washer, 57 outside and 51 inside, lies between the ring and the window.
Break the inside edge 0.3 mm. Passivate.
Fit: it sits in the 72.4 recess in the cap's bottom face, flush with that face. Six M3 x 8 screws into the cap, tightened evenly in a cross pattern to about 0.5 N m.
The 51 mm bore is the window's open span used in the stress calculation; do not open it out.
Check: flat within 0.1 mm across a straight edge.
